

Component

Module Overview

Building a Template

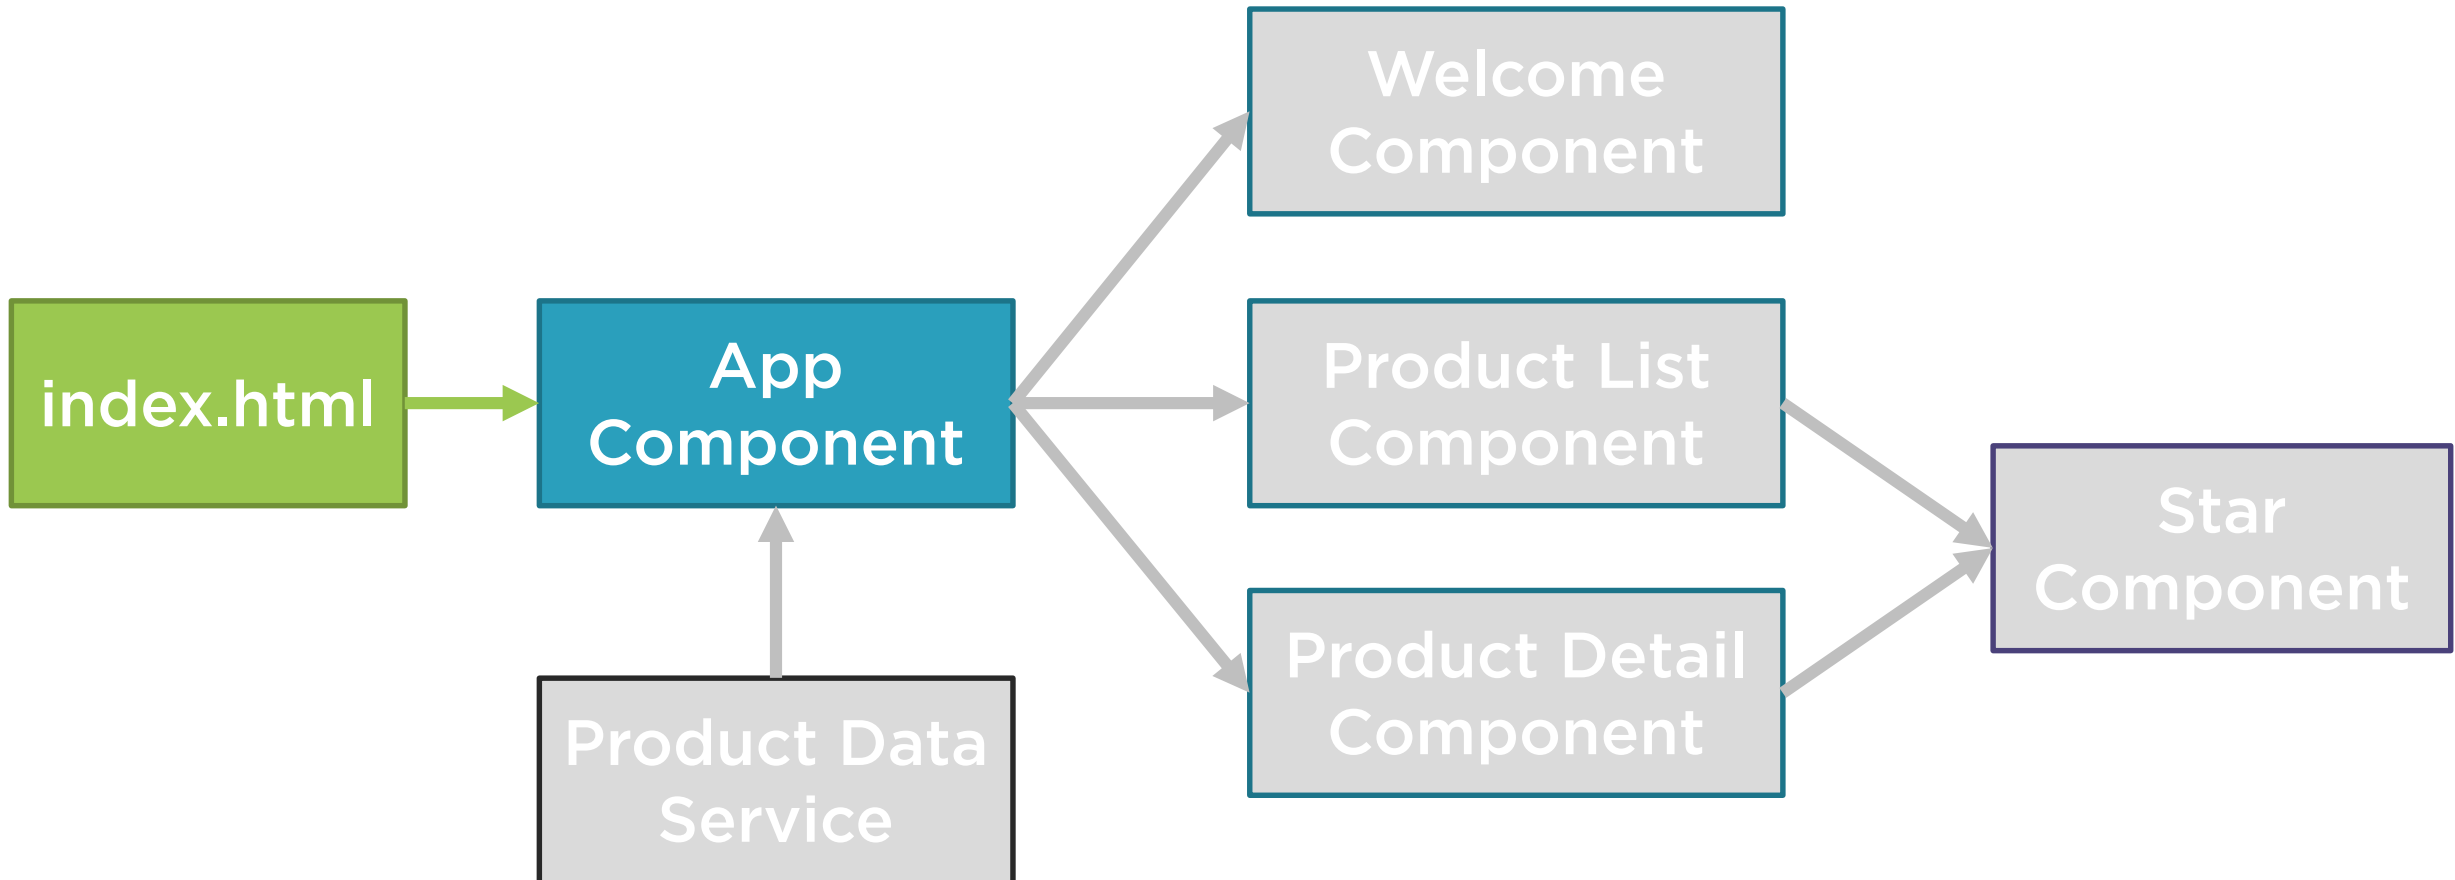

Using a Component as a Directive

Binding with Interpolation

Adding Logic with Directives

Application Architecture

Component

app.component.ts

```
import { Component } from 'angular2/core';

@Component({
  selector: 'pm-app',
  template: `
    <div><h1>{{pageTitle}}</h1>
      <div>My First Component</div>
    </div>
  `
})
export class AppComponent {
  pageTitle: string = 'Acme Product Management';
}
```

Defining a Template in a Component

Inline Template

```
template:  
"<h1>{{pageTitle}}</h1>"
```

Inline Template

```
template: `  
  <div>  
    <h1>{{pageTitle}}</h1>  
    <div>  
      My First Component  
    </div>  
  </div>  
`
```

ES 2015
Back Ticks

Linked Template

```
templateUrl:  
'product-list.component.html'
```

Building the Component

product-list.component.ts

```
import { Component } from 'angular2/core';

@Component({
  selector: 'pm-products',
  templateUrl: 'app/products/product-list.component.html'
})
export class ProductListComponent {
  pageTitle: string = 'Product List';
}
```

Using a Component as a Directive

index.html

```
<body>
  <pm-app>Loading App...</pm-app>
</body>
```

product-list.component.ts

```
@Component({
  selector: 'pm-products',
  templateUrl: 'product-list.component.html'
})
export class ProductListComponent { }
```

app.component.ts

```
@Component({
  selector: 'pm-app',
  template: `
    <div><h1>{{pageTitle}}</h1>
    <div>My First Component</div>
  </div>`
})
export class AppComponent { }
```

Using a Component as a Directive

index.html

```
<body>
  <pm-app>Loading App...</pm-app>
</body>
```

product-list.component.ts

```
@Component({
  selector: 'pm-products',
  templateUrl: 'product-list.component.html'
})
export class ProductListComponent { }
```

app.component.ts

1

```
@Component({
  selector: 'pm-app',
  template: `
    <div><h1>{{pageTitle}}</h1>
    <pm-products></pm-products>
    </div>`
})
export class AppComponent { }
```

Using a Component as a Directive

index.html

```
<body>
  <pm-app>Loading App...</pm-app>
</body>
```

product-list.component.ts

```
@Component({
  selector: 'pm-products',
  templateUrl: 'product-list.component.html'
})
export class ProductListComponent { }
```

app.component.ts

```
@Component({
  selector: 'pm-app',
  template: `
    <div><h1>{{pageTitle}}</h1>
    <pm-products></pm-products>
    </div>`,
  directives: [ProductListComponent]
})
export class AppComponent { }
```

1
2

Using a Component as a Directive

index.html

```
<body>
  <pm-app>Loading App...</pm-app>
</body>
```

product-list.component.ts

```
@Component({
  selector: 'pm-products',
  templateUrl: 'product-list.component.html'
})
export class ProductListComponent { }
```

app.component.ts

3

```
import {ProductListComponent} from 'product-list.component';
```

1

```
@Component({
```

```
  selector: 'pm-app',
```

```
  template: `
```

```
    <div><h1>{{pageTitle}}</h1>
```

```
    <pm-products></pm-products>
```

```
    </div>`,
```

2

```
  directives: [ProductListComponent]
```

```
})
```

```
export class AppComponent { }
```

Binding

Coordinates communication between the component's class and its template and often involves passing data.

Interpolation

Template

```
<h1>{{pageTitle}}</h1>
{{'Title: ' + pageTitle}}
{{2*20+1}}
{{'Title: ' + getTitle()}}
<h1 innerText={{pageTitle}}></h1>
```

Class

```
export class AppComponent {
  pageTitle: string =
    'Acme Product Management';
  getTitle(): string {...};
}
```

Directive

Custom HTML element or attribute used to power up and extend our HTML.

- Custom
- Built-In

Custom Directives

app.component.ts

```
@Component({
  selector: 'pm-app',
  template: `
    <div><h1>{{pageTitle}}</h1>
      <pm-products></pm-products>
    </div>
  `,
  directives: [ProductListComponent]
})
export class AppComponent { }
```

product-list.component.ts

```
@Component({
  selector: 'pm-products',
  templateUrl: 'product-list.component.html'
})
export class ProductListComponent { }
```

Angular Built-in Directives

Structural Directives

***ngIf: If logic**

***ngFor: For loops**

*ngIf Built-In Directive

```
<table *ngIf='products.length'>  
  <thead>  
  </thead>  
  <tbody>  
  </tbody>  
</table>
```

*ngFor Built-In Directive

```
<tr *ngFor='#product of products'>
  <td></td>
  <td>{{ product.productName }}</td>
  <td>{{ product.productCode }}</td>
  <td>{{ product.releaseDate }}</td>
  <td>{{ product.price }}</td>
  <td>{{ product.starRating }}</td>
</tr>
```

Local Variable

for...of vs for...in

for...of

- Iterates over iterable objects, such as an array.
- Result: di, boo, punkeye

```
let nicknames= ['di', 'boo', 'punkeye'];  
  
for (let nickname of nicknames) {  
  console.log(nickname);  
}
```

for...in

- Iterates over the properties of an object.
- Result: 0, 1, 2

```
let nicknames= ['di', 'boo', 'punkeye'];  
  
for (let nickname in nicknames) {  
  console.log(nickname);  
}
```

*ngFor Built-In Directive

```
<tr *ngFor='#product of products'>
  <td></td>
  <td>{{ product.productName }}</td>
  <td>{{ product.productCode }}</td>
  <td>{{ product.releaseDate }}</td>
  <td>{{ product.price }}</td>
  <td>{{ product.starRating }}</td>
</tr>
```

Checklist: Template

Inline template

- For short templates
- Specify the **template** property
- Use the ES 2015 back ticks for multiple lines
- Watch syntax

Linked template

- For longer templates
- Specify the **templateUrl** property
- Define the path to the HTML file

Checklist: Component as a Directive

product-list.component.ts

```
@Component({  
  selector: 'pm-products',  
  templateUrl: 'product-list.component.html'  
})  
export class ProductListComponent { }
```

app.component.ts

```
import {ProductListComponent} from 'product-list.component';  
@Component({  
  selector: 'pm-app',  
  template: `  
    <div><h1>{{pageTitle}}</h1>  
    <pm-products></pm-products>  
  </div>`,  
  directives: [ProductListComponent]  
})  
export class AppComponent { }
```

3

1
2

Checklist: Interpolation

One way binding

- From component class property to an element property.

Defined with double curly braces

- Contains a template expression
- No quote needed

Checklist: Structural Directives

*ngIf and *ngFor

- Prefix with an asterisk
- Assign to a quoted string expression

*ngIf

- Expression is evaluated as a true or false value

*ngFor

- Mark the local variable with #
- Specify 'of': '#product of products'
